Mapelastic is a two-component mortar based on cementitious binders, fine-grained selected aggregates, special additives and synthetic polymers dispersed in water. Blended according to a formula developed in MAPEI’s own research laboratories. When the two components are mixed together, a freeflowing mix is obtained which may be easily applied, even on vertical surfaces, at a thickness of up to 2 mm in one single coat.

Thanks to the high content and quality of the synthetic resins, the cured layer of Mapelastic remains constantly flexible under all environmental conditions and, furthermore, is completely waterproof up to a pressure of 1.5 bar and resistant to the chemical attack of de-icing salts, sulphates, chlorides and carbon dioxide.

Mapelastic has excellent bonding properties to all concrete, masonry, ceramic and marble surfaces, as long as they are sound and sufficiently clean.

This property, together with its resistance to the deteriorating effect of UV rays, a characteristic of this product, ensures that structures protected and waterproofed with Mapelastic have a long service life, even if they are located in areas with particularly rigid climatic conditions, in coastal areas with a saline-rich atmosphere or in industrial areas where the air is particularly polluted.

Mapelastic meets the requirements defined by EN 1504-9 (“Products and systems for the protection and repair of concrete structures — Definitions, requirements, quality control and evaluation of conformity — General principles for the use of products and systems”) and the minimum requirements claimed by EN 1504-2 coating (C) according to the PI, MC and IR principles (“Protection systems for concrete surfaces”).

WHERE TO USE

- Waterproofing and protection of concrete structures, renders and cementitious screeds.

SOME APPLICATION EXAMPLES

- Waterproofing of concrete basins used for containing water.
- Waterproofing bathrooms, showers, balconies, terraces, swimming pools, etc. before laying ceramic tile finishes.
- Waterproofing of plasterboard, render or cementitious surfaces, lightweight cement blocks and marine-grade plywood.
- Flexible smoothing layer for light—sectioned concrete structures, including those subjected to minor deformation when under load (e.g. pre—cast panels).
- Protection of renders or concrete with cracks caused by shrinkage, against the infiltration of water and aggressive atmospheric elements.
- Protection, against the penetration of carbon dioxide, of concrete pillars and joists and road and railway viaducts repaired with products from the Mapegrout range, and structures with an insufficient layer of concrete covering on the reinforcement rods.
- Protection of concrete surfaces which may come into contact with seawater, de-icing salts such as sodium or calcium chloride, and sulphates.
**REGOMMENDATIOIIS**

- Do not use Mapelastic for thick coatings (more than 2 mm per coat).
- Do not apply Mapelastic at temperatures below +8°C.
- Do not add cement, aggregates or water to Mapelastic.
- Protect from rain and water spilage for the first 24 hours after application.
- When Mapelastic is used on large terraces or flat roots that will not be covered with tiles, vapour vents shall be appropriately positioned according to the level of humidity in the substrate (generally every 20-25 m²).

This operation is indispensable when Mapelastic is laid on substrates which are particularly absorbent, such as screeds which have been lightened with polystyrene or foamed clay.

**CLEANING**

Due to the high bonding strength of Mapelastic, even on metals, it is recommended to wash work tools with water before the mortar sets. Once it has set, cleaning may only be carried out by mechanical means.

**CONSUMPTION**

Manual application:
approx. 1.7 kg/m² per mm of thickness.

Spray gun application:
approx. 2.2 kg/m² per mm of thickness.

**PAGKAGING**

Units of 32 kg:
component A: 24 kg bags:
component B: 8 kg drums.

Upon request, component B may also be supplied in 1000 kg tanks.

Units of 16 kg:
26 kg bags and 14 kg drum.
Mapelastic: two-component flexible cementitious membrane for waterproofing balconies, terraces, bathrooms and swimming-pools, and for protecting concrete in compliance with the requirements of EN 14891 and EN 1504-2 coating (C) principles PI, MC and IR.
